### **AOC - EECA / RIFS**

# **Status Report**

**Date of Report:** 

November 10, 2006

**Period Covered:** 

October 1, 2006 - October 31, 2006

#### Work Performed during the Reporting Period

Conditional approval of the plan to carry out a soil vapor investigation was received on August 26, 2006. However, in subsequent discussion with the analytical laboratory, it was determined that the 1-liter sample containers required by the Work Plan could not be used because the laboratory could not certify these containers as being clean (an additional requirement of the Work Plan). Approval for the use of 6-liter containers was sought on October 9<sup>th</sup> and the Agency approved this request on October 10<sup>th</sup>. At the same time, approval was also granted for the use of helium for leak detection. The approval for the changes was conditional on the submission of a revised Work Plan incorporating these and previously approved changes. The revised plan was submitted on October 24<sup>th</sup> and comments from the Agency were received on November 2<sup>nd</sup>. Responses to those comments are being prepared.

Three reports of completed investigations (the Evaluation of Buried Drums, The DNAPL Characterization and Remediation Study, and the Mass Flux Estimates report) were approved in a September 12, 2006 letter from the Agency, as was the Work Plan for DNAPL recovery at BR-I. The activities described in that Work Plan began on October 31<sup>st</sup> and rehabilitation of BR-I was completed on November 2<sup>nd</sup>.

A Work Plan for investigations in the utility corridors between sites H and L was submitted to the Agency on September 29<sup>th</sup>.

A meeting with the Agency is tentatively scheduled for December 8, 2006.

### **Attachments**

There are no Technical Memoranda or data submitted with this report.

## Work Scheduled for Next Reporting Period

Respond to Agency comments on the revised soil vapor investigation Work Plan and, if approved, begin investigation.

Monitor fluid level recoveries in BR-I and install an extraction pump in this well once the fluid levels have stabilized.

### **Submittal Status**

The following reports and evaluations are scheduled to be submitted to the Agency during the next reporting period:

• Responses to Agency comments on the revised soil vapor investigation Work Plan.
